31 January 1946

G-2 REPORT on the YAWATA Works NIPPON Iron & Steel Company, Ltd.

Prepared by the AC of S, G-2 Headquarters 32d Infantry Division APO 32, (Fukuoka, Kyushu, JAPAN)

# HEADQUARTERS 32d INFANTRY DIVISION APO 32 (Fukuoka, Kyushu)

31 January 1946

### G-2 REPORT on the YAWATA Works NIPPON Iron & Steel Company, Ltd.

iveryone knows that Japan's dream of World Conquest originated in time ago. This sadistic dream promised ultimate victory the foes of Nippon - over the whole world - mainly through itual supremacy. The code of Bushido and inspiring tales of reat Samurai Warriors, together with zealous ancestor worand unswerving faith in the divinity of the Emperor, were y planted into the hearts and minds of all Japanese subjects. The two atomic bombs had devastated Hireshima and the two atomic bombs had devastated Hireshima and tall power was equally important - if not more so - as spirit-tokus-pokus.

lowever, Japan's war lords did not plunge their nation into ithout some materialistic preparations. That dream of world est definitely included guns, tanks, ships, planes, and the lals to produce these tools of modern warfare. The industry stern civilization was studied, and later used as a model in ing and expanding the great industrial centers of Honshu and u. Steel - the greatest single factor in the development great war machine - had to be produced, and small Kyushu d was best equipped to manufacture this vital product; it seed many of the necessary raw materials.

n March of 1896 a bill was drawn up to establish, in the four ending in 1899, a steel works to produce 90,000 tons of steel r at the initial cost of ¥ 4,095,793, and an Imperial Ordnance ding for the organization was promulgated. Since the enterwas brand new in Japan, the government was unable to find upplies of ore or machinery within the Empire, and, despite aperial Ordnance stipulation "to buy by competitive tenders", s necessary to make purchases through individual negotiations foreign manufacturers and sellers.

he little village of Yawata by the Shimonoseki Straits in ern Kyushu was chosen as the site for the new iron and steel. Construction of this first Iron and Steel Works in Japan ader way, and in June of 1898 the Imperial Diet voted an sion of two years for construction of the Works and an lonal out lay of ¥ 6,474,056. The following year the governor works, Koreshiro WADA, proceeded to Shanghai and concluded tract with the Hanyang Iron Administration Bureau for the

was a banner year for Japan's steel industry. June of ir saw the completion of the Okura River Reservoir and the g of production in the first factory - a Wooden Mould german engineers were hired. From May to November a saic open furnace, a light plate mill, a medium shape mill, whive furnace sprang up in quick succession. In September is Hospital was opened; and it was in October of that year first casting came off the line.

or the turn of the century the Yawata Works expanded rapidfurnaces were erected and started operations in 1902;
ang up in 1903; and construction and expansion continued
cilerated pace in the years following. In 1905 the first
ganization was formed - the Worker's Mutual Relief Associain 1913 an agreement was signed with the Han-Ya-Ping Co
the Japanese government undertook financing the company
susion of the mines and for redeeming the company's old
Another agreement was concluded for the company's employinese advisors in matters of shipment of contracted ore,
ing, and accounting. The outstanding amounts of iron ore
iron contracted for totalled 15 million tons and 8 million
spectively.

pril of 1916, at which time Japan was at war with Germany, rial Diet approved the government proposition for an ture of ¥ 34,515,450 to achieve the aim of producing tons of steel materials a year. This extended work was be completed in five years, but the program was latered to four years in view of the pressing needs brought on war. However, due to unexpected changes in the world sitthe result of the end of World War I, the expansion prosagain changed and was not actually completed until as 1929.

1933 all of the equipment of the Anshan Steel Works of ia was turned over to the Yawata Works, and in that same a law governing the Nippon Iron and Steel Co., Ltd. was ated. On January 29th of the year following, the Nippon d Steel Co., Ltd. was duly formed by amalgamation of the Imperial Steel Works, the Wanishi Works, the Mitsubishi the Kamaichi Works, the Kyushu (West Yawata) Works, and i Works. The new company with a subscribed capitol of 40,000 commenced work on February 1, 1934.

Nippon Iron and Steel Co., Ltd., now the greatest in continued to expand with the Osaka Iron Co., Ltd. being ted in 1936. In 1939 the Worker's National Service tion was created, and in 1941 the company's shareholders widely extended by law in order to keep the company's

ing World War II the Yawata Works was raided three times ican aircraft. Small raids on 16 June and 20 August of

i considerable damage in some areas of the Yawata Works but of seriously hamper operations in the plant.

is Yawata Iron Works, as it stands today, is a huge plant is spread out along the Shimonoseki Straits in the neighborties of Yawata and Tobata. (See Inclosure #1, Map of the District with index, and Inclosure #2, Map of the Tobata ct with index). The Works presently employs a total of 19,000 mel of which 16,000 are laborers, and 3000 are members of aff. Of these employees many were formerly in the Military e of Japan. According to the plant supervisor, Mr. Kitamura, the policy of the Yawata Works to reemploy returning service—so were employed in the Works prior to their entry into the e. He stated that approximately 1200 of the present staff out 3000 of the laborers were formerly in the armed forces an.

closure #3 is a listing of all the furnaces and plants of wata Works, Nippon Iron & Steel Company, Ltd. In most cases tes of erection or commencement of work are given. From isting it is possible to note the vast amount of construction expansion which has been undertaken since 1900.

closure #4 is a list of all the shareholders of the Nippon nd Steel Company, Ltd. as of 26 May 1943 which illustrates nancial expansion of the company since it was established 6 with an initial outlay of ¥ 4,095,793.

e Yawata plant consists of eight major departments, which the Business Department, (2) the Transportation and ng Department, (3) the Engineering Department, (4) the ision Department, (5) the Educational Bureau, (6) the cal Research Institute and Chemical Industry Department, e Health Department, and (8) the Plant Hospital. A detail-pection of these various departments was made by 1st Lt.

O'Hara of the 120th FA Bn in the latter part of October rly November of 1945, and his findings are recorded in ure #5, Report on Detailed Investigation of the Various ments of the Yawata Iron Works.

s manufacturing process for the main products of the Yawata orks is illustrated by Inclosure #6, Manufacturing Process n; the amount of "Rolling Stock" (locomotives, freight cars, tomobiles) is shown in Inclosure #7; the monthly outputs of on and ingot iron in gram tons from January 1937 to Septem-14 are listed in Inclosure #8, and the amount of steel sold Works from January 1937 to June 1946 is tabulated in are #9.

closure #10, a blue print of the harbor area illustrates and are #11 describes the harbor facilities of the Yawata Works.

the present time the plant is manufacturing steel for

steel for use in buildings, while the high carbon steel is imarily in the manufacture of train axles, train wheels, and racks. The main consumers to whom the raw steel is now ent are railroad factories, agriculture tool manufacturers, letal plants, and wire nail manufacturers. The plant now entirely on ore mined in Japan, whereas prior to the war the iron ore supply was imported from China and Malaya. the steel being produced today is made by melting Japanese and equipment. The control, disposition, and actual melt-these former Japanese war weapons is under the direct sion of American Occupation personnel. During the month mber 1945 approximately 1000 tons of Japanese weapons were in furnaces at the Yawata Works and converted into low-raw steel.

ereas the wartime weekly output of the plant was approxi-42,000 ton, the present output is now only about 2000 ton eakly. Most of the transporting of the raw steel to the consumers is now done by rail. Due to the mines which ay in the hargor, 1000 ton ships are now the largest which accomodated, whereas during the war 10,000 ton ships could led. Presently, ships carry only about 30 per cent of the hipments, the rest being transported by rail.

ving conditions for the employees of the Yawata Iron Works from satisfactory at the present time. In the first place re very low. The highest rate paid for skilled labor is r day, while unskilled labor receives as low as # 1 for work. The monthly wage of the staff employees ranges 65 to a maximum of ¥ 500. According to the plant officials, e scale is soon to be increased, however. Another factor uting to the poor living conditions is the critical houstage. Only 10 per cent of the present working personnel be facilitated by the Factory Housing Project which, during, accommodated nearly 100 per cent of the workers. The aerial of 8 August 1945, while not severely damaging the Factory did destroy most of the houses and buildings adjacent to nt. Finally, the food problem confronting the workers emely critical. The present food ration is not enough on a subsist, and the laborers must supplement this ration at gardening and buying from the "blackmarket". The arket" in Yawata and Tobata is now known as a "free market", prices are nonetheless actual blackmarket prices and tive to the small wage earner. According to the plant ls, price control existed during the war, but at the present ere is no control whatsoever.
